## Who is MA-BO?

MA-BO is a fast-growing international aerial platform company with offices in both the Netherlands and Germany. MA-BO operates throughout the Netherlands and Germany and even beyond. MA-BO is a family business with many decades of experience in this industry. This experience helps us to distinguish ourselves in providing creative custom-made solutions and full-service concepts regardless of the size or height, so that we create a safe workplace for you, where you can work easily and efficiently!

## What can MA-BO offer you?

MA-BO started as a aerial platform rental Company. MA-BO has a wide variety of aerial platforms which consists of truck mounted platforms (both B and C driving license), crawler boom lifts, spider lifts, articulated boom lifts, scissor lifts, telescopic boom lifts and telehandlers. In short: for every assignment the right aerial platform! MA-BO is represented in various sectors. The aerial platform rented with operator is often used for the construction industry, infrastructure, high voltage, telecom, windmills and maritime sectors. Aerial platforms without operator are often rented to the tree care, (steel) construction, infrastructure, installation, industry, painting, cleaning, etc.

In addition to the rental of aerial platforms MA-BO can also provide other services that can help you to carry out your activities efficiently and are mainly intended to relieve you. This includes arranging traffic measures, permits applications, driving plates, transport of materials to and from the construction site with a trailer (with truck mounted forklift) or semi-trailer and transporting material at, for example, roof locations with a moving lift, combi crane or aerial platform.

MA-BO can also train your staff in working safely with aerial work platforms, in which aspects such as soil pollution, personal protective equipment, weather conditions, technical aspects and legislation and regulations are extensively discussed.

## Full service concept for the construction and installation sector

Ma-Bo has developed a full-service concept especially for the construction and installation sector, with the intention to relieve you as our partner in construction and installation technology with your planning and performance as much as possible. Ma-Bo has a wide range of equipment, accessories and additional services that can be used to carry out your work. Of course you are not obliged to use all these products and services, you can still contact us for just renting an aerial platform.

### Working safely and efficiently at height

In these sectors, aerial platforms are mainly used for installation and construction work as a safe alternative to working with a ladder or scaffolding, but also for moving loads through a power lift system as an alternative to cranes for example at locations that are inaccessible or difficult for cranes.

Installations for which aerial platforms are regularly used are electrical installations, installation of solar panels, lightning control systems, air conditioning and climate systems, facade cladding, advertising (masts) and the application of billboards and the hanging of, for example, Christmas lights.

### Both indoor as outdoorlocaties

Aerial platforms are used for both indoor and outdoor locations. At indoor locations, electric scissors, electric articulated telescopes, electric mast lifts and spider lifts are mainly used. For outdoor situations, in high buildings use is mainly made of truck mounted platforms ranging between 15m and 75m and sometimes even 90m. The truck mounted platforms above 30m are in principle always rented out with an operator (a truck license is obliged for these machines).

## Vertical transport

By means of powerlift systems, with which all aerial platforms from 40 m are equipped, can also (compact and light) materials be moved, such as building materials, solar panels, air conditioners, illuminated advertising or billboards, facade panels, etc. The maximum gondola load is 600 kg and depends on the lateral reach. Due to its size and weight, the aerial platform can also be used in many locations that are not or difficult to reach for a crane. This option is therefore very practical and efficient.

Ma-Bo has also included a special material lift, which is often used in the moving industry, in its range for the vertical transport of materials. This allows materials (such as solar panels, for example) to be transported on or off the roof relatively quickly and cheaply. (Rotating) telehandlers are also regularly used for vertical material transport. In addition, Ma-Bo offers Alu-Crane. Aluminum cranes are light (from 18 tons) and can also be used on difficult terrain or terrain that is difficult to access. Think, for example, of narrow access roads or bridges and access roads with a limited number of permitted tonnages. They have a maximum lifting capacity of 6 tons. The Alu-Crane can be equipped with a 'fixed' work basket and is therefore a combination between a crane and aerial platform and therefore multi-useable.

### Wide and specialist range

MA-BO has also special aerial platforms, which can be used for installing the camera systems, lightning rods, lighting, advertising, etc., such as crawler lifts, spider lifts, (articulated) telescopic boom lifts or diesel scissor lifts. Ma-Bo also has special aerial platforms with a 4x4 drive and caterpillar tracks or trax tires for difficult terrain or rough terrain. You can work safely and comfortably on all types of surfaces and in all weather conditions (with the exception of strong wind and/or thunderstorms).

### Road plates, permits and traffic measures

MA-BO has a wide range in all the above categories. Furthermore, Ma-Bo can provide steel or plastic road plates for your construction site. Ma-Bo advises to have a survey of the work location carried out in advance, so that an inventory can be made of how many and what type of road plates are required, but also which type of aerial platform (given the soil conditions, approach routes and specific location characteristics) is best used and whether traffic measures are required to carry out the work safely and efficiently. The traffic measures (road closures, signage and traffic controllers) and permit applications can be taken care of entirely in-house by Ma-Bo.

### Material Transports by Forklift trailers or low loaders

Finally, Ma-Bo can take care of all material transports by means of portable forklift trailers and (construction) machine transports by means of low loaders and MA-BO can, if desired, provide shovels.

Ma-Bo likes to think along with you to develop and offer a suitable full-service concept and/or customized solutions, even in complex situations. All this at an attractive price.

## What distinguishes MA-BO?

MA-BO is extremely flexible and customer-oriented and distinguish itself in providing creative tailor made solutions and full-service concepts. MA-BO also advises and assist in complex situations. MA-BO offers an excellent service for attractive prices! Almost all our employees speak several languages and are familiar with both German and Dutch legislation and regulations.

MA-BO is strong in both manned and unmanned rental and also has a lot of experience with large projects with international aspects. We work closely with our network partners, both inside and outside of system lift, so that we can always meet your demand. The truck-mounted aerial work platforms C driving license (from 27 meters to 75 meters) are almost always rented out together with well-trained operating personnel, who provide you with optimal guidance and assistance in the safe execution of your work.

The work locations are usually visited in advance by our field work planners. They make an inventory of which measures must be taken to be able to carry out the work efficiently and safely. Permit applications, traffic measures, driving plates and contacts with the landlords are taken care of by our back-office work planners and, if desired, we can also provide (material) transport for you with our trailers or semi-trailers. In short, we strive to provide you with the best possible service, even 24/7 if desired!

## MA-BO and Systemlift

MA-BO is a co-shareholder in Sytemlift AG, a far-reaching partnership of more than 70 aerial work platform rental companies (and thus more than 70 locations) in Germany and surrounding countries. Our own fleet consists of more than 9,300 aerial platforms and many thousands of related machines, such as cranes, forklifts and other (construction) machines.

As a result, you benefit from a very extensive range with the most diverse aerial work platforms and related machines at very attractive prices and low transportation costs. Thanks to enormous know-how and professional knowledge within Systemlift, you will always receive appropriate advice and extensive guidance.

Systemlift is ISO 9001 certified. Systemlift sets very high quality standards for its partners, both in terms of policy and implementation, with strict rules and recurring unannounced audits. The partners are fully facilitated and assisted by Systemlift in all kinds of areas, including training, purchasing and PR & marketing. All this to provide you with the best possible service.

VCA is essential and vital during our work because of the increased safety risk in our industry. Both our organization and all our employees are VCA certified. In this way we are at all times aware of the risks and we try to reduce them as much as possible and take appropriate safety measures and keep each other sharp!

## MA-BO Team

Our employees are reliable, enthusiastic, eager to learn and driven people, who are open-minded with a hands-on mentality. These are the core values on which we select.

As a family business, we offer a personal and committed work environment, in which the focus is on further both personal and organizational) growth, development and professionalization. We always strive to further optimize the quality of our employees and services. Our organization is characterized by fast decision-making, short lines and a strong problem-solving ability.
